Question 9
Correct
Mark: 1.00 out of 1.00
[Flag question](#)

Mr.Ram has been given a problem kindly help him to solve it. The input of the program is either 0 or 1. IF 0 is the input he should display "C" if 1 is the input it should display "D".There is a constraint that Mr. Ram should use either logical operators or arithmetic operators to solve the problem, not anything else.

Hint:
Use ASCII values of C and D.

Input Format:
An Integer x, $0 \leq x \leq 1$.

Output Format:
output a single character "C" or "D" depending on the value of x.

Input 1:
0
Output 1:
C

Input 2:
1
Output 1:
D

Question 8
Correct
Mark 1.00 out of 1.00
Flag question

In the 1800s, the battle of Troy was led by Hercules. He was a superstitious person. He believed that his crew can win the battle only if the total count of the weapons in hand is in multiple of 3 and the soldiers are in an even number of count. Given the total number of weapons and the soldier's count, Find whether the battle can be won or not according to Hercules's belief. If the battle can be won print True otherwise print False.

Input format:

Line 1 has the total number of weapons
Line 2 has the total number of Soldiers.

Output Format:

If the battle can be won print True otherwise print False.

Sample Input:

32
43

Sample Output:

False

For example:

Input	Result
32	False
43

Question 7

Correct

Mark 1.00 out of 1.00

Flag question

The program that you create for this exercise will begin by reading the cost of a meal ordered at a restaurant from the user. Then your program will compute the tax and tip for the meal. Use your local tax rate (5 percent) when computing the amount of tax owing. Compute the tip as 18 percent of the meal amount (without the tax). The output from your program should include the tax amount, the tip amount, and the grand total for the meal including both the tax and the tip. Format the output so that all of the values are displayed using two decimal places.

Sample Input

100

Sample Output

The tax is 5.00 and the tip is 18.00, making the total 123.00

For example:

Input	Result
100	The tax is 5.00 and the tip is 18.00, making the total 123.00

Answer: (penalty regime: 0 %)

```
1 x=int(input())
2 tax=0.05*x
3 tip=0.18*x
4 gt=x+tax+tip
5 print('The tax is',format(tax,'.2f'),end=' ')
6 print('and the tip is',format(tip,'.2f'),end='')
7 print(', making the total',format(gt,'.2f'))
```

REC-PS

Answer: (penalty regime: 0 %)

```

Marks for this submission: 1.00/1.00.

Question 6
Correct
Mark 1.00 out of 1.00
[Flag question](#)

Write a python program that takes a integer between 0 and 15 as input and displays the number of '1' s in its binary form.(Hintuse python bitwise operator.

Sample Input
3

Sample Output:
2

Explanation:
The binary representation of 3 is 011, hence there are 2 ones in it. so the output is 2.

For example:

Input	Result
3	2

Answer: (penalty regime: 0 %)

```
1 x=int(input())
2 y=bin(x)[2:]
3 z=y.count('1')
4 print(z)
```

REC-PS

Question 2
Correct
Mark 1.00 out of 1.00
Flag question

In London, every year during Dasara there will be a very grand doll show. People try to invent new dolls of different varieties. The best-sold doll's creator will be awarded with a cash prize. So people broke their heads to create dolls innovatively. Knowing this competition, Mr.Lokpaul tried to create a doll that sings only when an even number is pressed and the number should not be zero and greater than 100.

If Lokpaul wins print true, otherwise false.

Sample Input

10

Sample Output

True

Explanation:

Since 10 is an even number and a number between 0 and 100, True is printed

For example:

Input	Result
100	False

Answer: (penalty regime: 0 %)

```
1 n=int(input())
2 if(n%2==0 and n>0 and n<100):
3     print("True")
4 else:
5     print("False")

[Flag question](#)

Write a program that returns the last digit of the given number. Last digit is being referred to the least significant digit i.e. the digit in the ones (units) place in the given number.

The last digit should be returned as a positive number.

For example,

if the given number is 197, the last digit is 7

if the given number is -197, the last digit is 7

For example:

Input	Result
197	7
